

**Info-Setu**

# Democratising the Right to Information Through AI

A friction-free, AI-native platform that transforms every Indian citizen's grievance into a legally precise RTI application —bridging the gap between raw civic intent and structured legal accountability.

CIVIC TECH

RIGHT TO INFORMATION ACT, 2005

AI FOR PUBLIC GOOD

## Executive Summary

# What Info-Setu Is Built to Do

Info-Setu is a civic technology platform designed to make the Right to Information Act, 2005 accessible to every Indian citizen – regardless of legal literacy, language, or technical familiarity.

### **The Mission**

Empower every Indian citizen with the power of accountability by simplifying the legal complexities of filing an RTI application –no lawyer required.

### **The Core Vision**

Bridge the gap between raw citizen grievances and complex legal structures using an intuitive, AI-native platform that speaks everyday language.

### **The Solution**

A friction-free portal that translates plain text into formal, legally precise, structured RTI requests – automatically mapped to the correct administrative authority.

## The Core Problem

# A Broken Gateway to Transparency

The RTI Act, 2005 is one of India's most powerful democratic tools –yet it remains inaccessible to the very citizens it was designed to protect. Structural barriers prevent meaningful participation.

### Complex Legal Barriers

Drafting a legally valid RTI request requires structured formatting under Section 6(1) that the average citizen –without legal training –simply cannot navigate.

### High Rejection Rates

Thousands of applications are rejected annually by Public Information Officers due to vague framing, emotional language, or procedural technicalities –not merit.

### The Bureaucratic Maze

Citizens rarely know which specific government department or Public Information Officer holds the data they seek, leading to misrouted and abandoned requests.

### The Real Impact

Critical public accountability tools remain under-utilised, creating a structural barrier to transparency and meaningful grassroots civic engagement across India.

Comparative Analysis

# The Legacy Way vs. The Info-Setu Way

The traditional RTI filing process is slow, error-prone, and exclusionary. Info-Setu reimagines every step –from drafting to delivery – using intelligent automation designed for real citizens.

| Feature             | The Legacy Way                                                           | The Info-Setu Way                                                                  |
|---------------------|--------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| Drafting Process    | Manual formatting, prone to legal rejections and procedural errors       | Automated AI transformation into precise, Section 6(1)-compliant legal prose       |
| Routing & Authority | Manual tracking of specific Public Information Officers –often guesswork | Intelligent, automated system-to-department routing with verified PIO mapping      |
| Language Support    | Heavily reliant on formal English/Hindi legal drafts                     | Multi-lingual support accepting everyday vernacular input in any regional language |
| Turnaround Time     | Hours or days of legal research and manual drafting                      | Instant, single-click downloadable, submission-ready documents                     |

## Our Solution

# The AI-Powered RTI Engine

## 1 Natural Language Input

Users describe their civic issue –municipal water-logging, delayed road repairs, budget allocations –in plain, everyday language. No legal jargon needed.

## 2 The Legal Draftsman Agent

A specialised, prompt-engineered AI model instantly converts raw input into structured, numbered, objective questions conforming to Section 6(1) filing regulations.

## 3 Automated PDF Generation

Generates a professional, print-ready PDF containing all necessary statutory declarations –ready for postal submission or digital upload to RTI portals.

## How It Works in Practice

A citizen types: *"The road near my ward has not been repaired in 6 months despite complaints."*

Info-Setu identifies the relevant municipal authority, structures legally valid questions, and produces a submission-ready RTI application –in seconds.

✓ From grievance to legally valid RTI application:  
under 60 seconds.

## Technical Architecture

# High-Speed Tech Stack Built for Scale

Info-Setu is engineered for performance, reliability, and rapid iteration —using a modern, open-standards stack that can scale to serve millions of citizens across India.

### Frontend Experience

Built with **React (Next.js)** and **Tailwind CSS**, featuring an intuitive input-to-preview split-screen view for live, real-time feedback as users draft their requests.

### Backend Infrastructure

Powered by **Python FastAPI** —an asynchronous API framework ensuring fast execution, handling AI prompt payloads and database interactions with minimal latency.

### Storage Layer

Implements a relational database structure via **Supabase (PostgreSQL)**, mapping raw citizen inputs to targeted administrative units and final generated text outputs.

### AI S Document Core

Leverages the **OpenAI API** for legal drafting intelligence, paired with client-side PDF utilities for instant, privacy-preserving document generation.

Roadmap

# Future Advancements S Scalability

Info-Setu's vision extends far beyond PDF generation. The platform is designed to evolve into a comprehensive civic accountability ecosystem serving every state and union territory.

## Conclusion

# Market Impact S The Path Forward

### Empowering Communities

Moving civic engagement away from passive frustration and into structured, systemic accountability –giving every citizen a voice that the state is legally bound to answer.

### Unlocking Transparency

Providing NGOs, journalists, and active community citizens with a rapid tool to audit public infrastructure spending, local administration, and government service delivery.

### Proof of Concept at Scale

A production-ready, highly functional tool demonstrating that modern AI can directly solve historical bureaucratic bottlenecks –and that technology can be a genuine instrument of democracy.

### The Core Belief

Transparency is not a privilege for the legally trained. It is a fundamental right –and Info-Setu exists to make that right real for every Indian citizen.

**Built for India. Built for every citizen.**
